Beta Launch	29/05/2022			Oussama

KimboCorp blog testlink: <https://kimboCorp.vercel.app/>

**What does it mean by actual completion date?**

actual time completed means Oussama and Huan have checked the code and tested the functionality, and the code is pushed to github

**What happens if they do not finish by the time agreed?**

If a developer doesn't finish by time agreed he will have a warning of 2 days to deliver then after 4 days the contract will be canceled.

**How will reviews be carried out?**

Upon completion of work Oussama will check the quality of the code and if it meets the standards the contract is canceled.

-If the code is good Oussama and Huan will check if the work is good and matches the design. If it doesn't and there are minor issues the developer will be given days depending on the task

to finish. If it takes an unacceptable amount of time to fix, the contract will be canceled.

### **How will fixing issues be carried out?**

Developer will be given a priority list of what needs to be fixed, he will be given a time to fix the issue and if the developer goes beyond that timing there will be a cut back to money given and this should be detailed with every developer.

### **How much time do you allocate to fix issues?**

3 hours daily will be spent on managing and fixing issues.

### **What happens if issues are not fixed?**

The developer will get a cutback for money wasted and if the issues remain unfixed we roll the code one version back and we cancel the contract.

### **When will integration happen?**

Integration happens on every use case by the front-end developer who will integrate the front-end and the backend together to deliver work.

Major integration of a complete working version that can go to market will be done by Oussama and hosted on the main company's production servers.

### **When can we goto market?**

Depends on which version you want to go with. You can go upon the completion of first version which for

Kimbocorp: UC5

Topptalent: UC5

### **What happens if I need to finish xxx project within yy time?**

Resources will be allocated to get a developer (mainly front-end) who will get UCs and work together with the current front-end. This will require a stable code version first to carry on work. This can happen to kimbocorp or topptalent.

No backend is needed because what makes a project slower will be the front-end since designing and functionality is more time consuming.
